AINEXIA INTELLIGENCE
Automate. Integrate. Elevate.

PRODUCT BROCHURE

FACTORY MANAGER ● LIVE

Run your whole factory from one simple screen

Stock, quality checks, production, sales, accounts and GST in one place. Every batch can be traced from the supplier's truck to your customer's invoice.

BUILT FOR
Manufacturing plants: chemicals, pharmaceuticals, automobile components and engineering

DEPLOYMENT
Online web application, used in the browser on computers and on phones on the shop floor.

WEBSITE
ainexia.in/solutions/factory-management

THE CHALLENGE

Plants run on disconnected registers and spreadsheets

Stores, quality, production and accounts each keep their own records, and the same data is typed again and again.

Material is used before quality has checked and released it.

Tracing a batch back to its supplier, or forward to a customer, takes hours.

GST workings, return drafts and TDS are prepared by hand every month.

THE SOLUTION

How Factory Manager works

Each screen does one job. What the stores team enters is what quality, production and accounts see, with nothing typed twice. Journals post themselves from stock, purchases and sales, so the trial balance, profit and loss and balance sheet are always up to date.

Factory Manager is set up for how your industry works: pick your industry when you sign up and the right screens and rules come switched on. It works in English, Hindi and Gujarati, on computers and on phones on the shop floor.

BENEFITS

What Factory Manager is designed to improve

- Nothing typed twice across stores, quality, production and accounts
- Material used only after quality has released it
- Any batch traced in one click
- Books and GST workings always up to date

CAPABILITIES

Everything Factory Manager covers

All capabilities below are available today.

01

Stock and stores

- What you have, where it is and whether it is ready to use
- Receive, move, count and issue by batch

02

Quality checks

- New material held until it is tested
- A second person releases it
- Failed batches cannot be used

03

Production

- Recipes and work orders
- Yield and scrap
- Material used up only when output is recorded

04

Sales and dispatch

- Orders with credit checks
- Pick by batch, dispatch and proof of delivery
- Customer portal to follow orders

05

Accounts

- Journals posted automatically from stock, purchases and sales
- Trial balance, profit and loss and balance sheet always up to date

06

GST and TDS

- CGST, SGST or IGST worked out for you
- GSTR-1 and 3B drafts
- TDS on bills and Tally export

07

Industry setups

- Chemicals: litres to kilograms by density, hazard storage rules, tank stock, job-work blending
- Pharmaceuticals: approved suppliers, electronic batch records with signatures, holds, OOS, change control and recall drills
- Automobile and components: drawing revisions, vehicle serials, critical-part scans, EOL and PDI, heat-number trace, NCR and warranty
- Engineering and fabrication: routings, operations and rework, job-work challans with return timers, machine upkeep and calibration

08

Your data stays yours

- Each company's records kept apart in the database itself
- Nightly backups, an off-site copy and a weekly test restore
- Two-step sign-in with authenticator codes and automatic lock-out
- Every change recorded; posted entries are reversed, never edited

WHO IT'S FOR

Stores team

Receive, move, count and issue material by batch.

Quality

Test held material and release or reject each batch.

Production

Run work orders from recipes and record output, yield and scrap.

Sales and accounts

Dispatch orders, invoice with GST and keep the books up to date.

IN PRACTICE

Typical workflows

From sign-up to your first receipt

1. Request access: tell us your company, industry and state
2. We review and open your account, and email you when it is ready
3. Set up with a guided wizard: sites, stores, items, customers and opening stock from ready Excel templates
4. Invite your team and go live: everyone sees only the screens for their job

Batch to invoice

1. Material arrives and is held for quality
2. Quality tests and releases the batch
3. Production uses it in a work order
4. Finished goods are dispatched by batch and invoiced with GST

PRODUCT STATUS

● LIVE

Factory Manager is live. Companies request access, and each new company is reviewed before its account opens; no card is needed. Contact us for a walkthrough.

DEPLOYMENT & COMMERCIALS

Deployment. Online web application, used in the browser on computers and on phones on the shop floor.

Commercial model. Pricing on request.

FREQUENTLY ASKED

Who is it for?

Indian factories, with setups for chemicals, pharmaceuticals, automobile and components, and engineering and fabrication.

Why do you review new companies?

Every new company is reviewed before its account opens. Our team checks each one, then emails you when it is ready.

Can I bring my existing data?

Yes. The guided setup wizard loads items, customers and opening stock from ready Excel templates.

Does it work on phones?

Yes. It works on phones on the shop floor as well as on computers.

Does it file GST for me?

It works out CGST, SGST or IGST and prepares GSTR-1 and 3B drafts, with TDS on bills and Tally export.

Which languages does it support?

English, Hindi and Gujarati. Each person picks their own.
